Week 10

Introduction to Version Control Systems

At a basic level, version control is the process of tracking and managing changes to files over time.

svn, mercurial, git

Git & Github

Git

Git is a distributed version control system that tracks changes in any set of computer files, usually used for coordinating work among programmers collaboratively developing source code during software development.

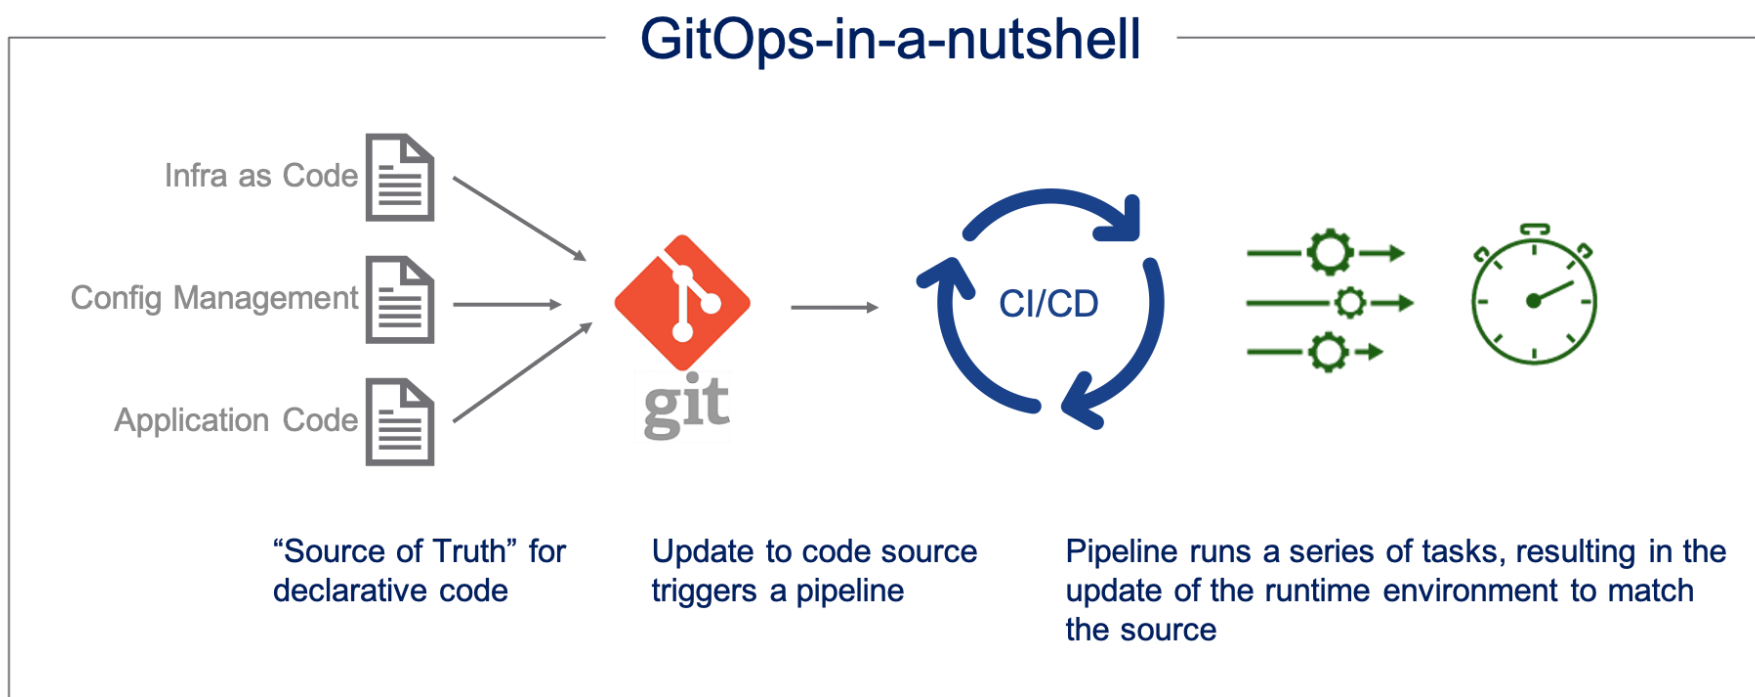

```
config, init, branch, status, add, commit, push, pull request, merge, clone, checkout, pull, fetch, switch, reset, remote, tag, rm, show, log
```

Github

Managed online git hosting owned by Microsoft

Source Code, Tasks, Teams, Actions, Registry

Git for DevOps

Monorepo vs Polyrepo

Git Submodules

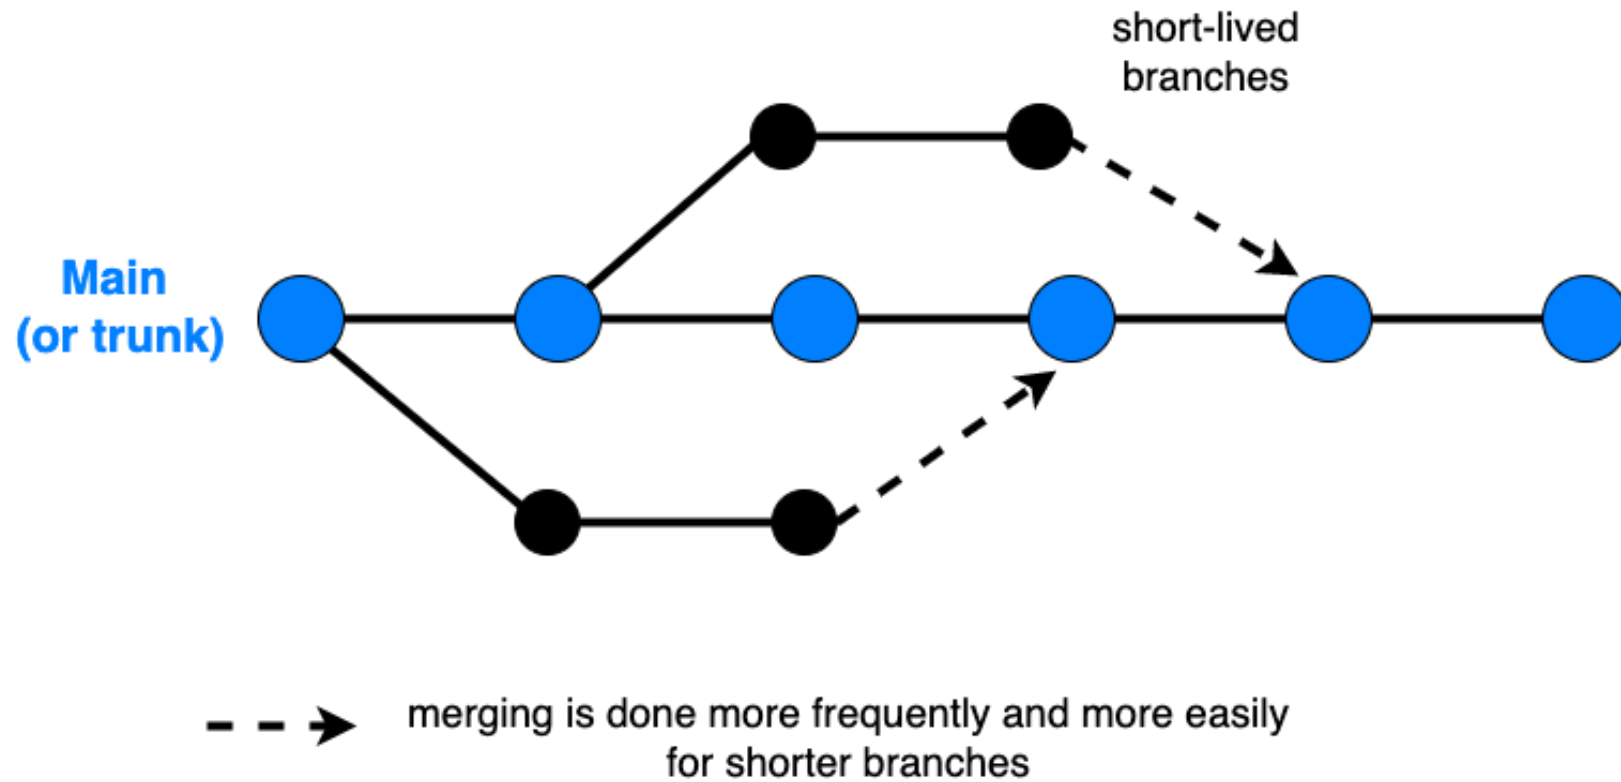

Branching strategies

Git Flow

Trunk Based Development (TBD)

Build & Package Manager Tools

Build tools

Set of programs that automate the process of building an executable application from source code
packer, gulp, grunt, ant, maven, docker, gradle

Package Managers

OS Level: yum, pacman, choco, homebrew, aptitude, apt, winget

Application Level : Bitnami, npm, NuGet, pip, RubyGems, yarn, conda

Build an artifact

The compiled or packed application as artifact

Run Application artifact

```
exe, bin, image, jar, war, elf, dll
```

Publish application artifact & artifact repository

registries, artifact repositories

Dependency Management in Software Development - Package Manager in JS app

```
npm init
```

Build and run applications in JS

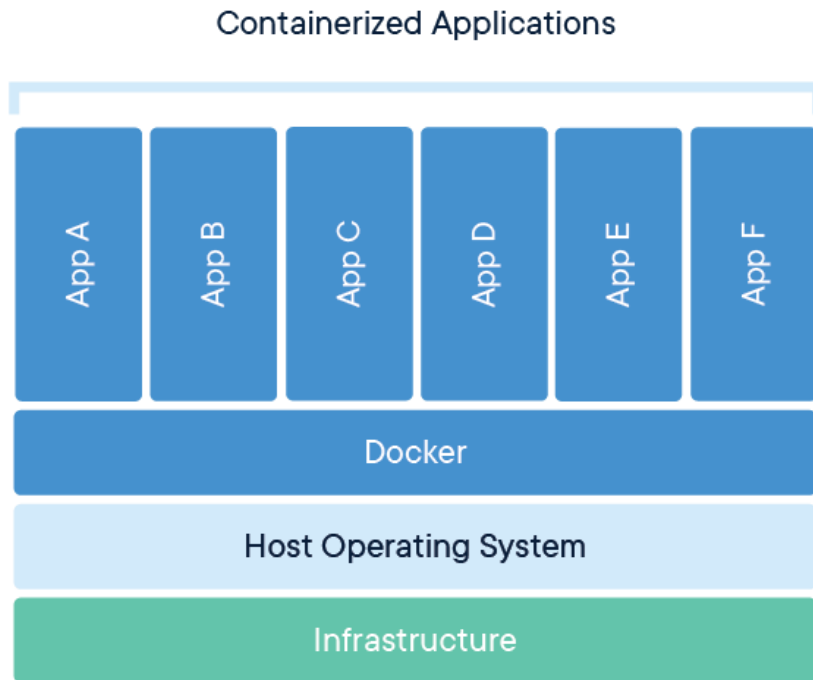

```
const express = require('express')
const app = express()
const port = 3000

app.get('/', (req, res) => {
  res.send('Hello World!')
})

app.listen(port, () => {
  console.log(`Example app listening on port ${port}`)
})
```

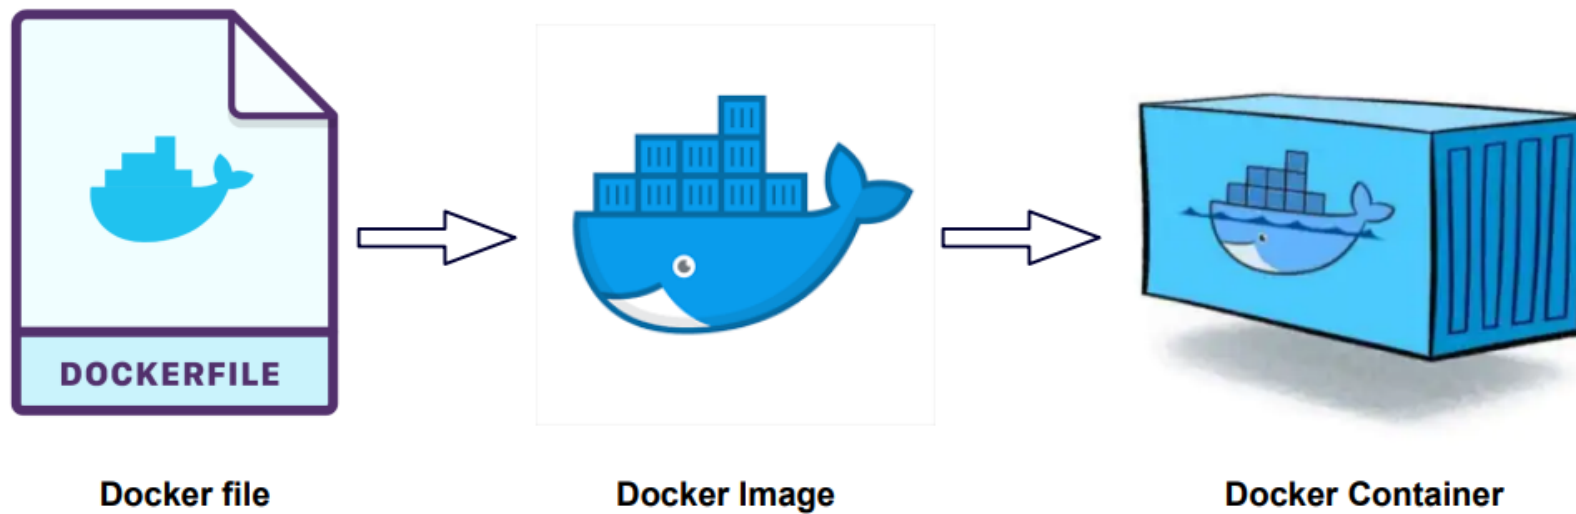

Build Tools & Docker

What is Docker? Basic Concepts and Getting Started

Docker Installation and Setting up the Environment

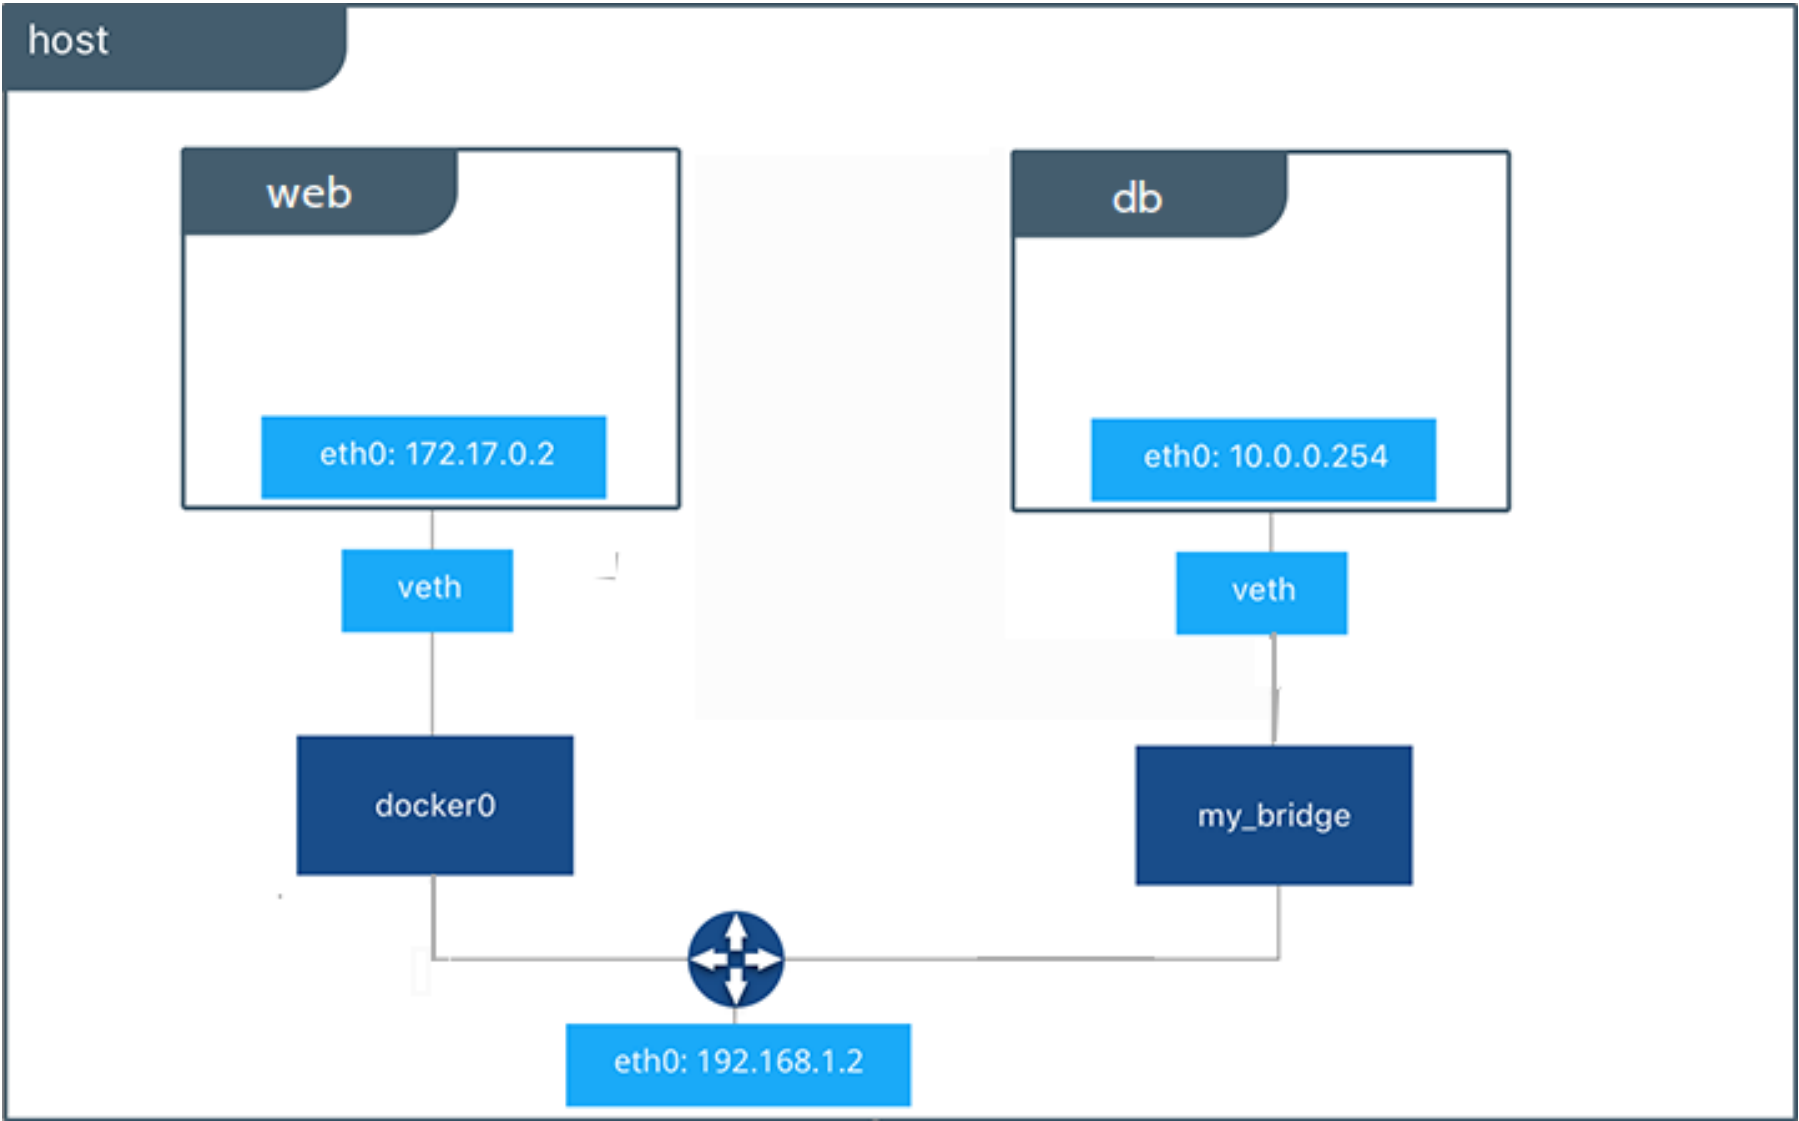

Docker Images: Creation, Management, and Distribution

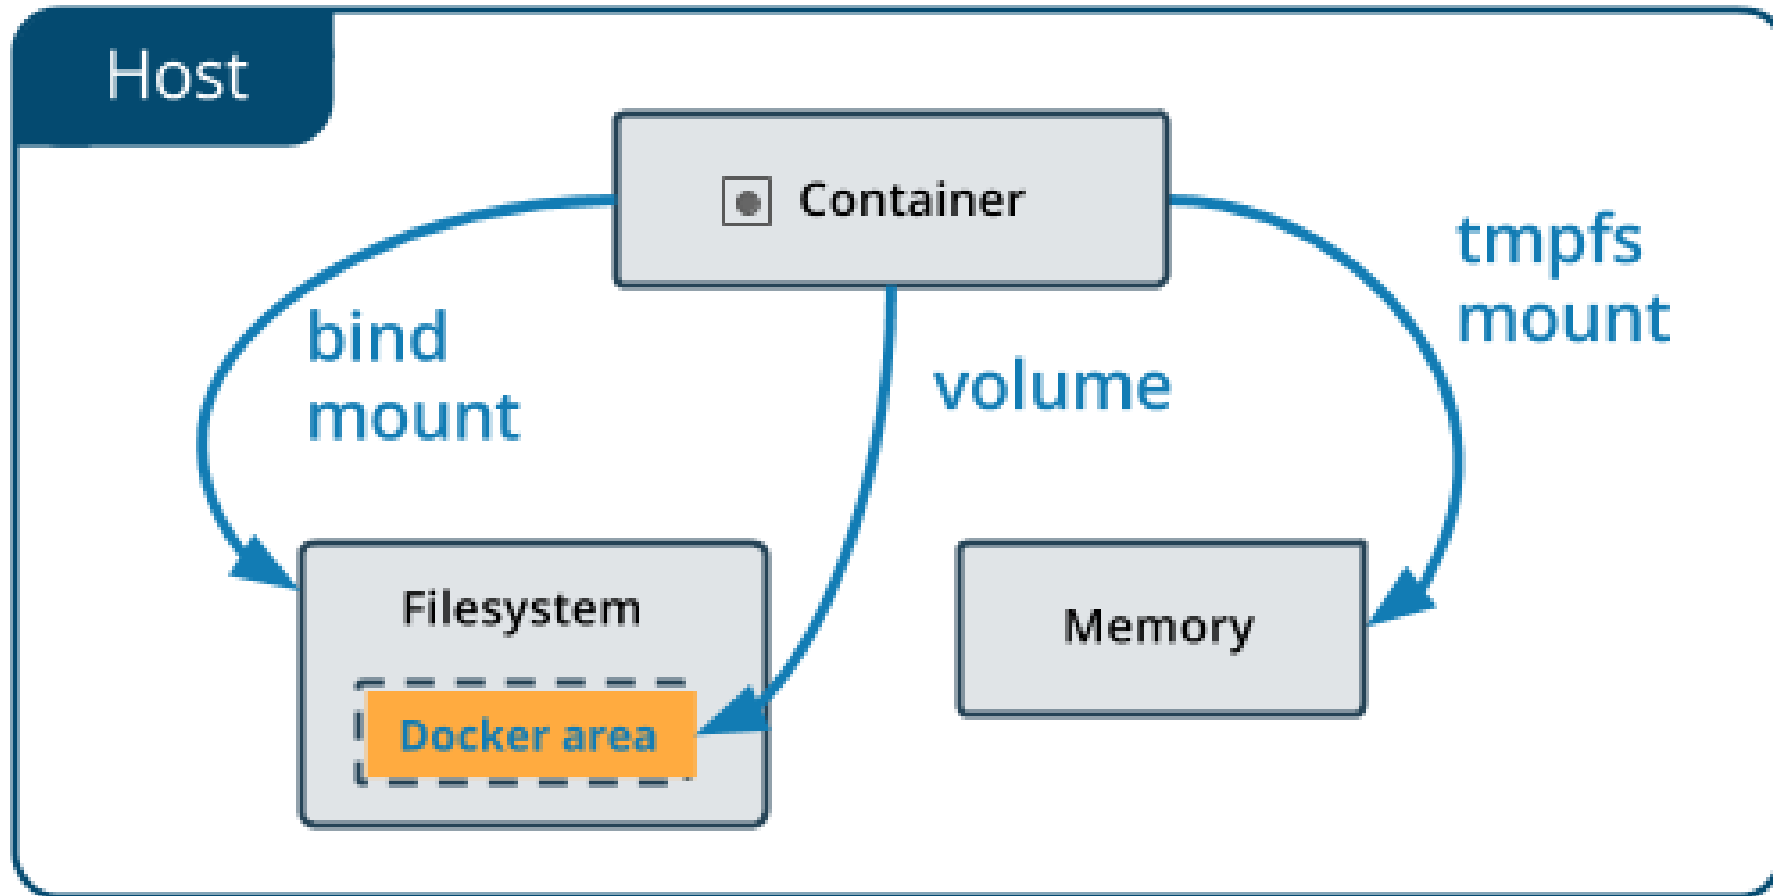

Docker Containers: Creation, Running, and Management

Docker Networks: Container Communication and Network Settings

Docker Storage: Storing and Sharing Data

Docker Compose: Managing and Deploying Application Stacks

Many thanks.
